volume is defined as the space occupied within the boundaries of an object in three dimensional space it is also known as the capacity of the object finding the volume of an object can help us to determine the amount required to fill that object like the amount of water needed to fill a bottle an aquarium or a water tank press a volume button at the right above the slider tap ring to turn on vibrate tap vibrat e to mute tap mute tips to turn the ring or sound back on your phone turn off vibrate or jan 20 2023 click adjust system volume click the speaker icon to unmute any muted sounds it will have a red circle with a line next to it click and drag to raise the slider bar under the device column 3 check the sound and volume settings on individual applications check to see if you are having volume problems on all apps or just one specific app calculating the volume of a tube essentially involves the same formula as a cylinder volume $\pi r^2 h$ except that in this case the diameter is used rather than the radius and length is used rather than height the formula therefore involves measuring the diameters of the inner and outer cylinder as shown in the figure above calculating each of their volumes and subtracting the volume volume is a measure of three dimensional space 1 it is often quantified numerically using si derived units such as the cubic metre and litre or by various imperial or us customary units such as the gallon quart cubic inch the definition of length cubed is dec 21 2022 a volume is a 3d measure while surface area is two dimensional the volume tells us about the cubic space that an object occupies and the surface area is the sum of all areas forming the 3d shape take the cardboard box as example volume is the amount of space taken up by the box simply it s the space available inside the box volume v noun the magnitude of the three dimensional space enclosed within or occupied by an object geometric solid etc symbol v a large mass or quantity the volume of 1 the degree of loudness or the intensity of a sound also loudness 2 the amount of space occupied by a three dimensional object as measured in cubic units such as quarts or liters cubic capacity see metric system table weights and measures table 3 a volume is simply defined as the amount of space occupied by any three dimensional solid these solids can be a cube a cuboid a cone a cylinder or a sphere different shapes have different volumes in 3d geometry we have studied the various shapes and solids such as cubes cuboids cylinders cones etc that are defined in three dimensions aug 29 2022 learn the formula for calculating the volume of a rectangular solid the formula for the volume of a rectangular solid is volume length width height or $v = lwh$ 3 find the length of the rectangular solid the length is the longest side of the rectangular solid that is parallel to the ground or surface it is resting on
